COMPRESSED AIR FILTERS / FILTRI PER ARIA COMPRESSA  
CONDENSATE SEPARATORS / SEPARATORI DI CONDENSA

## WHY AIR FILTER

Compressed air in industrial applications contains in  $1\text{Nm}^3$  more than 100 million of polluting particles. Most of these particles are so small in dimension, less than 5 micron, that they cannot be intercepted by the standard intake filters installed in the compressors.

Such particles, mixed with water and oil vapours generated during compression, cause the early wear and tear of the appliances and consequently they are the cause of expensive interruptions of the production and remarkable increase the number of interventions for maintenance purposes.

A right selection of filters will allow the best choice of the suitable equipment according to the quantity of air to be treated and the necessary filtration degree in order to increase and improve the performances of the whole system.

A filter element, which is saturated and/or obstructed from impurities compromises the air's quality and determines higher operation costs of the whole plant.

A pressure drop of 1 bar corresponds to a 7% higher energy consumption of the compressor reason why it is strongly recommended to replace the filter element when the pressure drop reaches a value of 0,6 bar (9 psi).

Safety: All equipment are manufactured, when applicable, according to the main European Directives like 2014/68/EU (PED).

Upon request, they are available in the ASME VIII-1 execution.

L'aria compressa utilizzata negli impianti pneumatici industriali, contiene una quantità superiore a 100 milioni di particelle contaminanti per  $\text{Nm}^3$ ; di queste, la stragrande maggioranza ha una dimensione così ridotta, inferiore a 5 micron, tale da non poter essere trattenuta dai normali filtri di aspirazione dei compressori.

Queste particelle, mescolate al vapore d'acqua ed olio generatosi durante la fase di compressione, provocano la precoce usura degli apparecchi utilizzatori e, di conseguenza, determinano costosissime fermate di produzione e riducono notevolmente gli intervalli di manutenzione.

Per ogni specifico utilizzo è possibile ottenere un perfetto dimensionamento del proprio impianto a seconda della portata d'aria da trattare e del grado di filtrazione richiesto così da incrementare ed ottimizzare le prestazioni dell'intero impianto.

Un elemento filtrante saturo ed/o ostruito da impurità, oltre a compromettere la qualità dell'aria resa determina maggiori costi di esercizio dell'intero impianto.

Una caduta di pressione di 1 bar, corrisponde ad un maggior consumo energetico del compressore del 7% per cui è altamente consigliato sostituire le cartucce filtranti quando la pressione differenziale raggiunge i 0,6 bar massimi.

Sicurezza: Tutti i filtri, dove applicabili, sono realizzati in accordo alle principali Direttive Europee riguardanti apparecchi in pressione quali 2014/68/EU (PED). Su richiesta sono disponibili in esecuzione secondo ASME VIII-1.

## PROFESSIONAL CONCEPT

### DIFFERENTIAL PRESSURE GAUGE

The differential pressure gauge can be mounted facing either direction and accurately indicates when filter element needs replacing. Alternatively a differential pressure colour indicator could be used.

### MANOMETRO DIFFERENZIALE

Il manometro differenziale può essere montato in entrambe le direzioni ed indica quando la cartuccia deve essere sostituita. In alternativa, si può utilizzare un indicatore differenziale.

### CONNECTION THREADS

Available in BSP and NPT executions. A protection on the filters' threads is used for a friendly connection.

### CONNESIONI ENTRATA/USCITA

Disponibili nelle versioni BSP e NPT. I filetti vengono protetti, durante la verniciatura, da depositi di vernice. Forniti completi di tappi di protezione in plastica.

### SAFETY WHISTLE SYSTEM

Prevents housing being opened whilst in operation.

### ORIFIZIO DI SICUREZZA

Evidenzia e sfida la pressione nel caso in cui il filtro venga aperto inavvertitamente.

### PLEATED TYPE FILTER MEDIA

Offers a high filtration surface area, extremely low pressure drop and a longer working life than wrapped type.

### MATERIALE FILTRANTE PIEGHETTATO

Offre un'alta superficie di filtrazione, una perdita di carico estremamente bassa ed una maggiore durata rispetto ai modelli di tipo avvolto.

### FILTER ELEMENT IDENTIFICATION CODE

Elements' filtration grade is clearly identified with the different colour of the outer foam sleeves and the special marks on the bottom of the filter element.

### CODICE DI IDENTIFICAZIONE DELLE CARTUCCE

Il grado di filtrazione delle cartucce è chiaramente identificato grazie a diversi colori del rivestimento esterno ed alla speciale marchiatura presente alla base della cartuccia stessa.

### REDUCED INSTALLATION SPACE

Only 6 cm – up to 20 cm for the bigger filters – of clearance is needed under the filter bowl for replacing the element.

### RIDOTTO SPAZIO DI INSTALLAZIONE

Solo 6 cm – fino a 20 cm per i filtri più grandi – di spazio sono necessari sotto il bicchiere del filtro per sostituire la cartuccia.

### BEST PERFORMANCES

The optimised filter design coupled with the new elements reduces flow resistance through the filter, compared with the previous series, up to 80%.

### PRESTAZIONI MIGLIORATE.

Il design ottimizzato del filtro combinato alle nuove cartucce riduce la perdita di carico, paragonata alla serie precedente, fino all'80%.

### FILTER ELEMENT INSTALLATION

A carefully designed bayonet connection is used on the filter. It guarantees easy and safe KLICK-ON fixing of the element, eliminates the need for a tie rod and the whole cross-sectional area is fully available.

### FISSAGGIO DELLA CARTUCCIA

Il nuovo filtro utilizza una connessione a baionetta accuratamente progettata. Questo sistema, permette un semplice e sicuro fissaggio a scatto ed elimina la necessità del tirante in modo che l'intera sezione di passaggio è disponibile per il flusso dell'aria.

### BODY'S CONSTRUCTION & PROTECTION

Is manufactured using high pressure casting mould that assures a high quality of the filter with reduced weight, high resistance without presence of porosity. The treatment of the interior and exterior of the housing assures an excellent resistance against corrosion.

### COSTRUZIONE E PROTEZIONE DEL CORPO FILTRO

I nuovi stampi in pressofusione garantiscono un'alta qualità del filtro nonché un ridotto peso, un'elevata resistenza senza presenza di porosità.

Un trattamento della superficie interna ed esterna del corpo filtro assicura una eccellente resistenza alla corrosione.

### CONDENSATE DRAINS

Standard is equipped with manual drain. Floating, electronic and no loss drains are available on request.

### SCARICATORI DI CONDENSA

Il filtro nella versione standard è fornito di scaricatore manuale. Scaricatori di tipo automatico, elettronico e no loss sono disponibili su richiesta.

## DF DUST FILTER DF SERIES

A protective dust filter suitable for the removal of solid, liquid and emulsionated particles down to 10 microns. A long working life coupled with a strong resistance to heat and abrasion make this filter the perfect choice for protecting your compressed air pipe system, machineries and accessories. The ceramic material is suggested for all the heavy duty applications.

### 4 STEPS KLICK - ON FIXATION

**EASY AND SIMPLE INSTALLATION  
OF THE CARTRIDGE**

**FISSAGGIO DELLA CARTUCCIA  
SEMPLIFICATO**

PRESSURE DROP PERDITA DI CARICO		AIR QUALITY QUALITÀ DELL'ARIA	MAX. WORKING TEMPERATURE TEMPERATURA MASSIMA
DRY NUOVO	WET SATURO	10 micron	100°C
0,07 bar	0,10 bar		

Filtro antipolvere di protezione per la rimozione di particelle solide, liquido ed emulsioni di diametro fino a 10 micron. Una lunga durata di esercizio unita ad un'ottima resistenza al calore ed all'abrasione, lo rendono la perfetta scelta per la protezione del vostro impianto d'aria compressa comprendente tubazioni, macchinari ed accessori. Il materiale ceramico è consigliato per tutte le applicazioni più gravose.

## QF SOLID CONTAMINANT PREFILTER QF SERIES

Prefilter suitable for the removal of solid particles down to 5 micron including liquid, emulsions and oil particles. The strong mechanical resistance makes this filter the ideal initial protection of a compressed air system to retain impurities and, for example, it is suitable as a post-filter for adsorption dryers.

### Sistema di fissaggio a Scatto CLICK ON in 4 fasi

Interception type filter suitable for solid and oil particles up to 1 micron and 0,1 mg/m³. This filter, by means of the impact, interception and coalescing principles, compels the submicron liquid particles, which from the inside strain through the element, to collide and thus become larger micro droplets, which will drip the bottom of the filter housing. The element itself is made by inner and outer stainless steel structure. PVC outside cover, suitable for air temperature up to 100°C and UV resistance, drains the coalesced liquid.

PRESSURE DROP PERDITA DI CARICO		AIR QUALITY QUALITÀ DELL'ARIA	MAX. WORKING TEMPERATURE TEMPERATURA MASSIMA
DRY NUOVO	WET SATURO	5 micron	100°C
0,05 bar	0,08 bar		

Prefiltro in grado di trattenere particelle solide di diametro fino a 5 micron inclusi liquidi, emulsioni e particelle oleose. L'elevata resistenza meccanica, lo rendono utilizzabile sia come mezzo di protezione iniziale di un impianto d'aria compressa sia per trattenere impurità di processo ad esempio come post-filtro per essiccatori ad adsorbimento.

PRESSURE DROP PERDITA DI CARICO		AIR QUALITY QUALITÀ DELL'ARIA	MAX. WORKING TEMPERATURE TEMPERATURA MASSIMA
DRY NUOVO	WET SATURO	1 micron	100°C
0,10 bar	0,16 bar	0,1 mg/m³	

Filtro ad intercettazione in grado di trattenere particelle solide ed oleose fino a 1 micron e 0,1 mg/m³. Sfruttando i principi dell'impatto inerziale, dell'intercettazione e della coalescenza, obbliga le particelle submicroniche di liquido che lo attraversano, a collidere formando microgocce più grandi che, per gravità, precipitano nel fondo del filtro. La cartuccia, costituita da uno strato di microfibre di borosilicato è sorretta da una struttura interna ed esterna in acciaio inox. Un nuovo rivestimento esterno in PVC resistente ai raggi UV ed a temperature fino a 100°C, è utilizzato per il drenaggio del liquido coalizzato.

## DF FILTRO ANTI POLVERE SERIE DF

## QF PREFILTRO PARTICELLE SERIE QF

## PF FILTRO DISOLEATORE SERIE PF

## COALESCING FILTER HF SERIES

Coalescing filter for liquid and solid particles up to 0,01 micron and 0,1 mg/m<sup>3</sup>. HF type filter is structurally similar to the PF series. The only difference lies in the filtration degree. Air passing through this filter is practically 99,99% oil free, therefore it is suitable to be employed when and where clean and pure air is a must. When placed after a dryer as an additional despoiling filter is an excellent prefilter for the CF series. (0,001 mg/m<sup>3</sup> upon request)

DRY NUOVO	WET SATURO	0,08 bar	DRY NUOVO	WET SATURO
		0,003 mg/m <sup>3</sup>		60°C

Filtro a coalescenza per il trattamento di particelle solide e liquido fino a 0,01 micron e 0,01 mg/m<sup>3</sup>. E' del tutto simile alla serie PF dalla quale differisce solo per il grado di filtrazione. Questo filtro permette di ottenere un'aria resa praticamente priva di olio nell'ordine del 99,99% e viene impiegato negli impianti in cui la purezza dell'aria è requisito indispensabile. Utilizzato come post-filtro disoleatore dopo un essiccatore in impianti specifici, è il pre-filtro ottimale della serie CF. (0,001 mg/m<sup>3</sup> su richiesta)

## ACTIVATED CARBON FILTER CF SERIES

There are treatments in industrial plants which in addition to oil free air, require the elimination of oil vapours and odours. For these purposes, the activated carbon filter through the absorption process attracts all odours and vapours left after despoiling and keep them on the surface of the activated carbon grain molecules. Owing to this, PF or HF filters have to be placed before the CF filters. The element is made by thick activated carbon layer covered by fiber coating kept in place by an inside and outside stainless steel wall.

## ACCESSORIES

### DIFFERENTIAL PRESSURE GAUGE

Displays the exact grade of saturation of the filter element. Available upon request.

### MANOMETRO DIFFERENZIALE

Visualizza l'esatto grado di saturazione della cartuccia del filtro. Disponibile su richiesta.

### DIFFERENTIAL PRESSURE INDICATOR

Colour visual indicator of the differential pressure drop through the filter element. Available upon request.

### INDICATORE DIFFERENZIALE

Indicatore visivo colorato regolato dalla pressione differenziale. Visualizza il grado di intasamento dell'elemento filtrante.

### MANUAL DRAIN

Is standard on all filters and condensate separators.

### SCARICATORE MANUALE

Standard su tutti i filtri e separatori di condensa.

### AUTOMATIC DRAIN

Automatic auto drain suitable for aluminium type filters and separators. Complete with drain manual control. Available from model F0005 up to F0440.

### SCARICATORE AUTOMATICO

Scaricatore di tipo automatico adatto ai filtri in alluminio ed ai separatori. Completo di regolazione manuale di scarico. Disponibili su richiesta dal modello F0005 al modello F0440.

### FLOATING TYPE DRAIN

This simple type of automatic drain is used to discharge the condensate from air tanks, filters, air dryers etc. It is supplied with manual testing drain and connection nipple with compensation tube.

### SCARICATORE A GALLEGGIANTE

Semplice e funzionale questo tipo di scaricatore automatico viene utilizzato per scaricare le condense da serbatoi, filtri, essiccatore, separatori di condensa. È dotato di test di scarico manuale e raccordo smontabile completo di tubo di compensazione.

### TIMED DRAIN

Thanks to the use of a timer that controls interval and duration of operation, this drain is widely used in compressed air industry. It is supplied with stainless steel net filter and ball valve.

### SCARICATORE TEMPORIZZATO

Grazie all'impiego di un temporizzatore che controlla l'intervallo e la durata dell'operazione, questo scaricatore è ampiamente utilizzato nell'industria dell'aria compressa. Completo di filtro di protezione inox e di valvola a sfera.

### ZERO - ELECTRONIC NO LOSS DRAIN

Suitable for all compressed air systems. Condensate level is automatically monitored thanks to a solenoid valve controlled by a capacitive sensor. The drain operates until all condensation has been removed without any loss of expensive compressed air.

### ZERO - SCARICATORE ELETTRONICO NO LOSS

Applicabile a tutti gli impianti d'aria compressa. Il livello di condensa viene automaticamente monitorato per mezzo di un'elettrovalvola comandata da un sensore capacitivo, il quale attiva lo scarico fino alla completa eliminazione della condensa senza la minima perdita di preziosa aria compressa.

### IN LINE QUICK CONNECTION

In line quick connection for two or more filters. Available from model F 0005 up to F 0095.

### COLLEGAMENTO MULTIPLO RAPIDO

Collegamento multiplo rapido per batterie di due o più filtri. Disponibile su richiesta dal modello F0005 al modello F0095.

### WALL SUPPORTS

Wall supports. Available from model F 0005 up to F 0095.

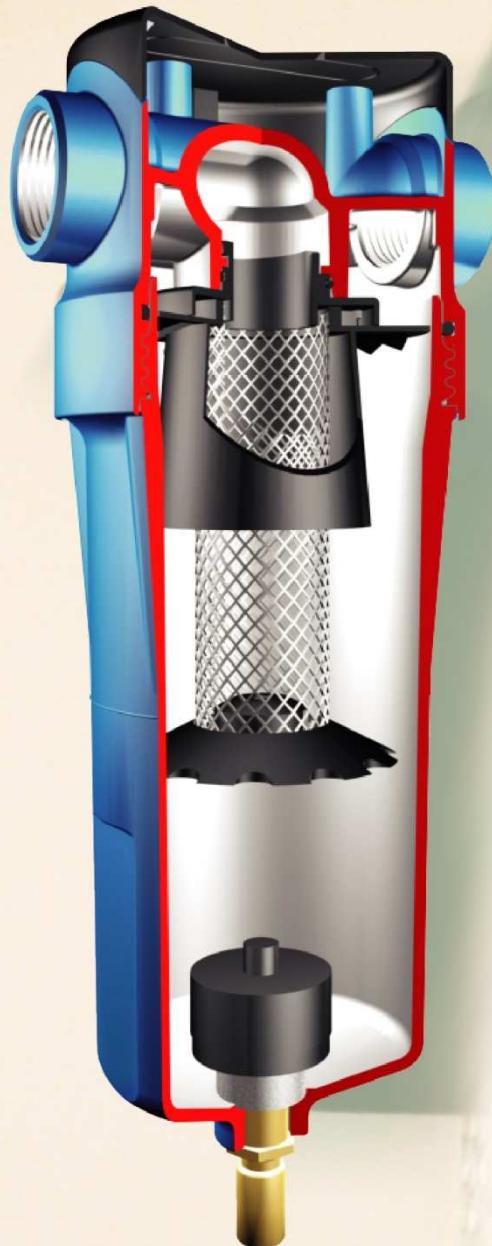

### SUPPORTI PER FISSAGGIO A MURO

Supporti per fissaggio a muro. Disponibili su richiesta dal modello F0005 al modello F0095.

## ACCESSORI

# CYCLONE TYPE CONDENSATE SEPARATORS

*Easy to install it is the best solution to remove the condensation generated during the compression process.  
Upon request equipped with floating, timed or no loss condensate drains.*

## APPLICATION

- Downstream of an air compressor
- Downstream an after cooler
- Downstream an air receiver

## SEPARATORI DI CONDENSA A CICLONE

Di facile installazione, sono il prodotto ideale per separare la condensa formatasi nei compressori prima di entrare nel serbatoio o nell'essiccatore. A richiesta forniti completi di scaricatore di condensa automatico a galleggiante, temporizzato o capacitivo.

## APPLICAZIONI

- A valle di un compressore
- A valle di un refrigeratore finale
- A valle di un serbatoio

# COMPRESSED AIR TREATMENT

Quality by choice

**ZERO SERIES**  
NO LOSS AUTOMATIC DRAIN VALVE

# NO LOSS AUTOMATIC DRAIN VALVE

## ZERO SERIES

### THE EVOLUTION

Zero Loss drain are designed to efficiently discharge condensate generated by every type of compressed air systems like air compressors, dryers, tanks, filters and separators.

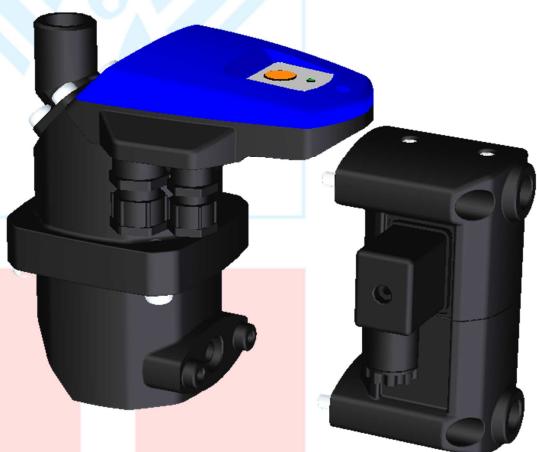

The new drain has been developed thanks to more than 20 years of experience in the field to be easily installed in all applications even under the most critical conditions in terms of port size, installation freedom and working conditions.

The extremely robust construction and the reliable operation along with the compliance with the main manufacturing and safety standards make the Zero drain the right choice for the modern market applications related with compressed air.

### THE NEXT GENERATION

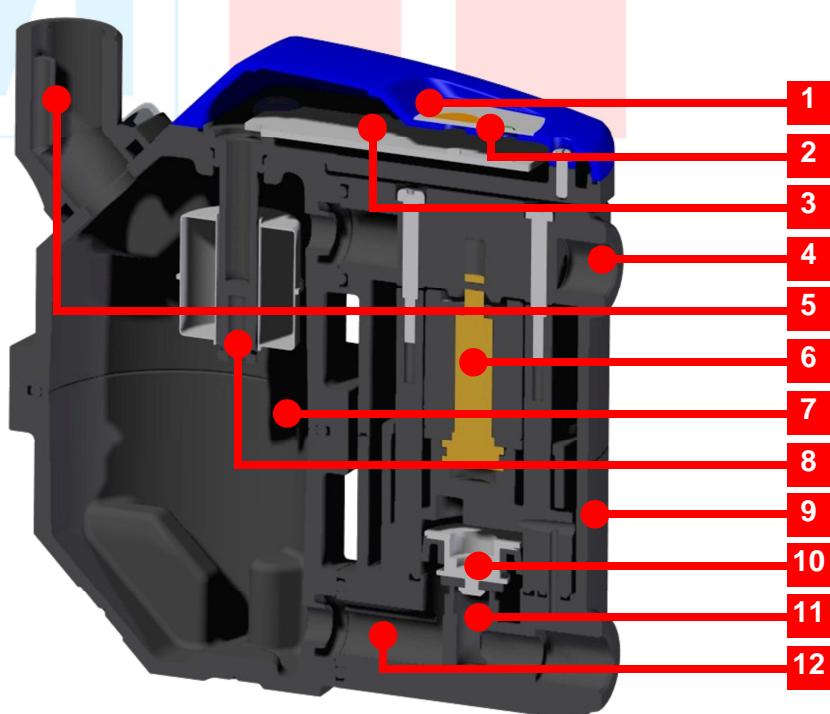

Zero drain package offers the most innovative solutions in term of flexibility because thanks to a very compact design it is easily installable under every type of tank even when the bottom clearance is closet o zero.

Thanks to the service package, that in a unique module includes all the components subject to tears, loss of production and maintenance costs are reduced to minimum.

### Features and benefits

- 1 Power supply
- 2 Test button
- 3 Potential free contact / Alarm
- 4 N.A. (not applicable)
- 5 Internal vent
- 6 Low power solenoid valve
- 7 Aluminum anodized body
- 8 Level sensor
- 9 Service kit package
- 10 Diaphragm discharge valve
- 11 Large orifice drain port
- 12 Built in mesh filter strainer

## LARGE CAPACITY WITH ENERGY SAVINGS

Zero drain has been developed with a compact design but with an extra large capacity starting with the smaller model Zero4 that is capable to handle large flow of condensate with no loss of compressed air.

## OPERATING PRINCIPLE

During operation condensate flows into the aluminum vessel (1) and when higher level is reached, the electronic sensor (2) gives the contact to the electronic microprocessor (3) to energize the large orifice diaphragm solenoid valve (4) and condensate is discharged until the lower level is reached without any air loss of compressed air.

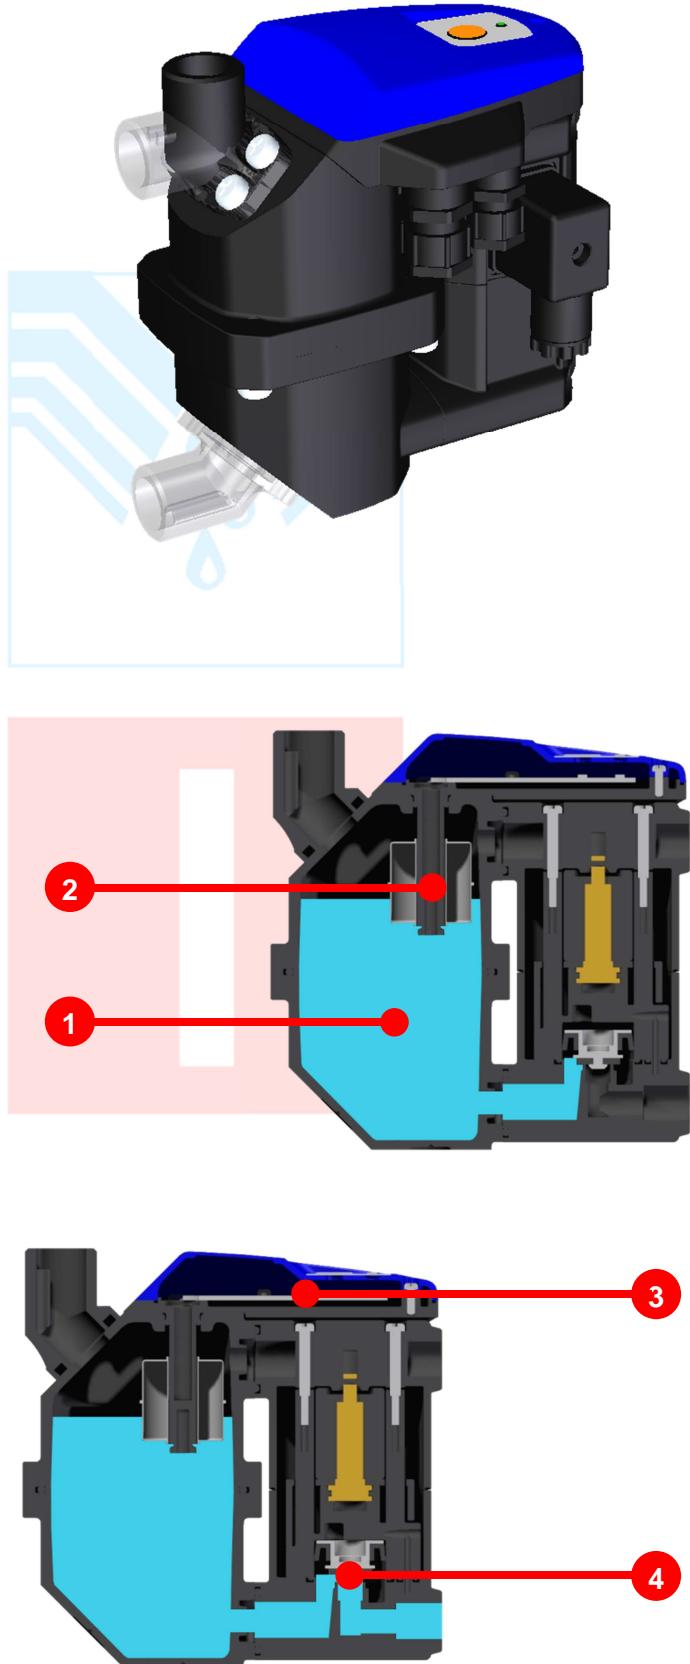

In case of overflow the alarm light is activated and will continue to flash until all condensate has been discharged from the unit.

## ADDITIONAL OPTIONS

- Heater for below freezing working conditions
- Mounting bracket for floor or wall mounting
- Different power supply (see specifications)

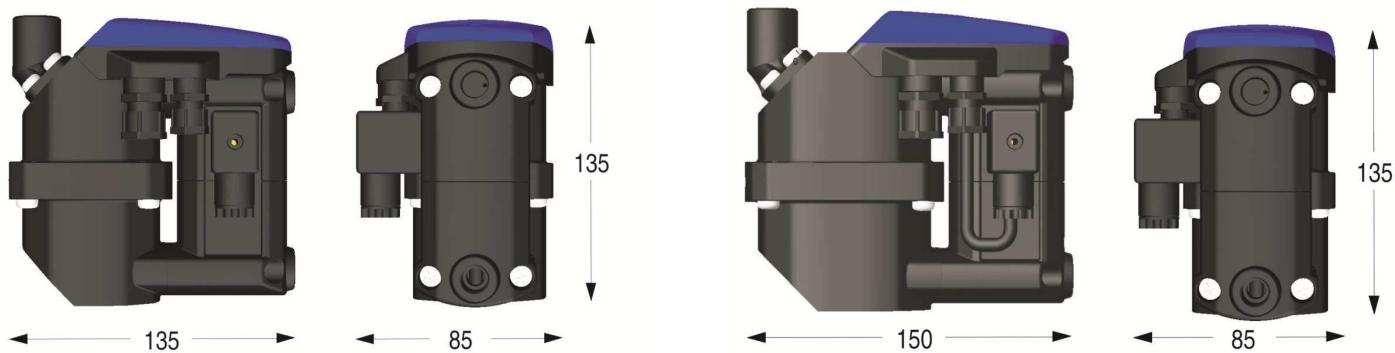

## INSTALLATION CONNECTIONS

Zero series has a large variety of installation connections options like 90 rotating elbow connector and a upper or lower connection option.

ZERO4 / ZERO8

ZERO12 / ZERO20

## Specification

Model	ZERO4	ZERO8	ZERO12	ZERO20
Compressor capacity (m³/h)	400	800	1200	2000
Dryer capacity (m³/h)	800	1600	2400	4000
Filter capacity (m³/h)	4000	8000	12000	20000
Max. operating pressure (bar)	0.8-16	0.8-16	0.8-16	0.8-16
Max. operating temperature (°C)	1-60	1-60	1-60	1-60
Inlet connection	1/2"	1/2"	1/2"	1/2"
Outlet connection	1/4"	1/4"	1/4"	1/4"
Power supply (V/Ph/Hz)	230/1/50	230/1/50	230/1/50	230/1/50
Weight (Kg)	0,80	0,80	0,95	0,95

# ALPS SERIES FILTERS

## Designed and Built for Exceptional Performance

OMI's advanced Alps Series compressed air filters reduce contamination in your air stream to help protect your critical processes and valuable equipment.

Our filters are rigorously tested and engineered with superior components to provide years of reliable performance and consistently high-quality air.

### Better Quality

Without effective filtration, products and processes that depend on compressed air are subject to increased scrap, poor quality and additional maintenance.

OMI Alps Series filters address these issues, helping to assure your compressed air system delivers clean, high-quality air throughout your facility.

### Better Efficiency

Maintaining a low pressure drop on all compressed air components is critical for an energy-efficient system. OMI Alps Series filters have been engineered to deliver low pressure drop throughout the life of the filter element and to provide a unique dual indicator that illustrates the true cost of pressure drop on the system.

### Better Choices

Every compressed air system has unique filtration requirements. Alps Series filters are available in four different filtration grades, providing complete filtration solutions for all critical compressed air processes.

Quality by choice

# Superior Filtration Technology

- Ⓐ **Patented dual indicator (optional)** shows differential pressure drop and economical operating efficiency
- Ⓑ **Patented smooth bore flow insert** directs air into the filter element, minimizing turbulence and pressure losses
- Ⓒ **All-aluminum, precision die cast body** suitable for 100°C and 20 bar g MAWP applications
- Ⓓ **Proprietary coating** applied to the inside and outside surfaces provides corrosion protection in harsh industrial environments
- Ⓔ **Filter element with stainless steel mesh** withstands high differential pressure while minimizing flow restriction through the element
- Ⓕ **Ergonomic bowl design with no-touch filter element** simplifies element replacement
- Ⓖ **Time strip label** indicates when it's time to change the element (CF Grade only)
- Ⓗ **Industrial-grade brass float drain (optional)** discharges accumulated condensate and oil more reliably than lesser quality plastic drains (no-loss and manual drains also available)
- Ⓘ **Deep-pleated filter media** reduces air flow velocity to maximize filtration efficiency and minimize pressure losses
- Ⓛ **High-efficiency drainage layer** improves liquid drainage properties and enhances chemical compatibility
- Ⓚ **Simple visual alignment** of the filter head and bowl ensures accurate assembly of components and helps to improve safety

# Complete Filtration Solution

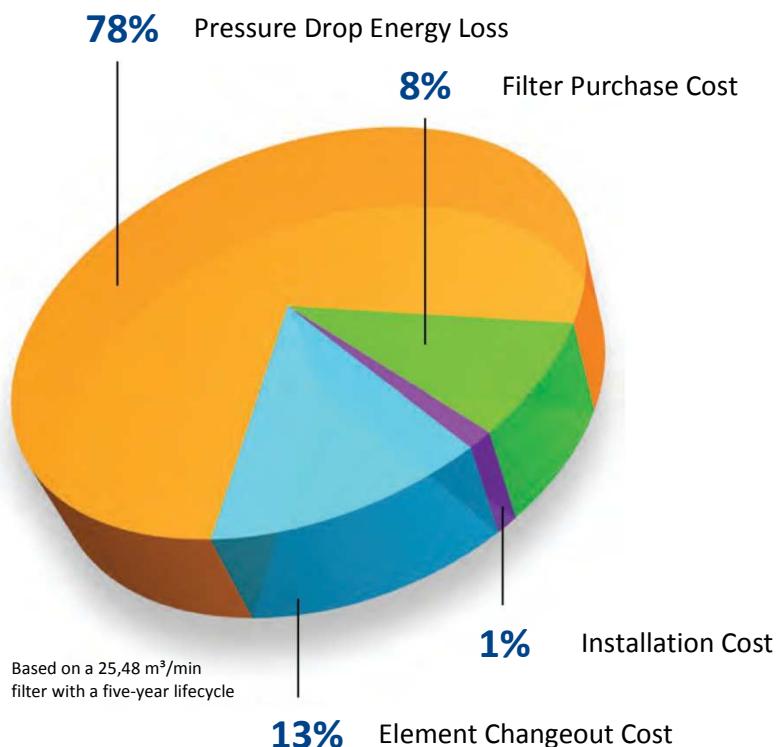

Alps Series filters are engineered to be a complete filtration solution, incorporating features that address air quality, energy efficiency and ease of maintenance.

## The Standard for High-Quality Air

Alps Series filters provide clean, high-quality air as defined by ISO 8573.1:2010, and are certified by a third party under ISO 12500-1. With multiple filter element grades available, there is a filtration solution that will meet your unique requirements.

## Energy Efficient Through and Through

Pressure drop accounts for over three-quarters of the ownership cost of a compressed air filter. Even when a filter element is clean and dry, it can rob a compressed air system of pressure, causing the air compressor to work harder and increase energy costs. The flow path through the Alps Series filter housing reduces turbulence and enhances efficiency, while the deep-pleated element design further minimizes pressure drop.

## Designed with Maintenance in Mind

Features such as no-touch element replacement and visual bowl-to-head alignment indicators make maintaining the Alps Series filter hassle-free. The “zero-clearance” design requires minimal space around the filter, allowing Alps Series filters to be installed where other filters won’t fit. Long element life provides efficient operation for up to one year between element changeouts, helping to reduce overall ownership costs\*.

\* Frequency of element changeout will depend on the unique conditions of each customer’s air system.

## Quality Assured by OMI

OMI has more than 20 years of air filtration experience. Our manufacturing facility ensures quality, reliability and outstanding performance. Our filters undergo advanced testing and are uniquely designed and manufactured to work with the full range of OMI products.

## Grade CF - Activated Carbon Filtration

Oil vapor and hydrocarbon odor removal, providing a maximum remaining oil content of <0,003 mg/m³ (<0,003 ppm) @ 21°C (Precede with Grade HF filter)

## Grade PF - General Purpose Protection

Particle removal down to 0,1 micron including coalesced liquid, water and oil, providing a maximum remaining oil aerosol content of 0,1 mg/m³ (0,1 ppm) @ 21°C

## Operating Limitations:

**Maximum Operating Pressure**

20 bar g

**Maximum Recommended Operating Temperature**

100°C (Grade PF, HF, QF)

**Maximum Recommended Operating Temperature**

60°C (Grade CF)

**Minimum Recommended Operating Temperature**

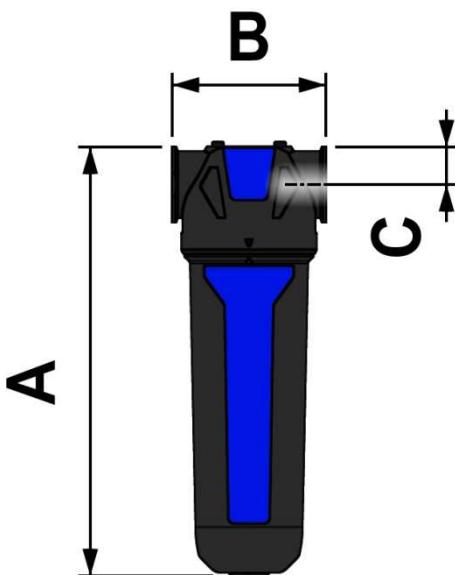

1°C

## Grade HF - High Efficiency Oil Removal Filtration

Particle removal down to 0,01 micron including water and oil aerosols, providing a maximum remaining oil aerosol content of 0,01 mg/m³ (0,01 ppm) @ 21°C (Precede with Grade PF filter)

## Grade QF - General Purpose Dust Filtration

Dust particle removal down to 1 micron

To use correction factors, multiply the filter's capacity by the correction factor to get the new filter flow capacity at the non-standard operating pressure. For example, a 190 m³/h filter operating at 11 bar has a correction factor of 1,25. 1,25 x 190 = 237,5 m³/h capacity at 11 bar.

## Available options

<b>DIFFERENTIAL PRESSURE GAUGE</b> Displays the exact grade of saturation of the filter element. Max. Temperature: 80°C		<b>MANUAL DRAIN</b> 1/2" ball valve manual drain.	
<b>AUTOMATIC DRAIN</b> Automatic auto drain suitable for Alps series filters. Completed with manual testing drain. Max. Pressure: 17 bar – Max. Temperature: 80°C		<b>SC-CHROM – TIMED DRAIN</b> Thanks to the use of a timer that controls interval and duration of operation, this drain is widely used in compressed air industry. Max. Pressure: 16 bar	
<b>SC-12M – FLOATING DRAIN</b> This simple type of automatic drain is used to discharge the condensate from air tanks, filters, air dryers, etc. It is supplied with manual testing drain and connection nipple with compensation tube. Max. Pressure: 16 bar		<b>ZERO DRAIN</b> Specifically designed to reduce to zero: - the air consumption thanks to the capacitive control; - the maintenance thanks to the Replacement kit; - the space for the installation underneath the tank. Max. Pressure: 16 bar	

All accessories as pressure gauge, condensate drains (the manual drain as well) and other options if requested will then be supplied separately with different code.
